

SOFTWARE UPDATE

**Innuos Introduces Sense 26, Featuring a New Classical Music Experience and AirPlay 2**

*Discover Classical Music in a richer, more intuitive way, with enhanced library organisation and greater freedom to enjoy music.*

Faro, Portugal

19 October 2026

Innuos today announces **Sense 26**, a significant update to its in-house-developed software, introducing a **new Classical Music Experience** and **AirPlay 2 support**.

Designed to bring listeners closer to their music, Sense 26 makes Classical Music discovery and organisation more intuitive, while opening up new ways to enjoy audio from a wider range of apps and services.

## A New Classical Music Experience

Classical Music rarely fits neatly into the traditional artist, album and track structure. A single recording can involve composers, conductors, orchestras, ensembles and soloists, while one composition may span several movements.

With the **new Classical Music Experience**, Sense 26 brings this rich musical structure into the listening experience. Album pages now group tracks by work and clearly display the

people behind each recording, including composers, conductors, orchestras, ensembles, choirs and soloists.

A dedicated **Works section** on composer pages makes it easier to explore different recordings of the same composition, while enhanced search allows listeners to discover music by composer, work title, conductor, soloist or ensemble. The Now Playing screen also displays the work alongside its movement, providing greater context during playback.

Building and maintaining a Classical Music library is now simpler. Newly ripped CDs are automatically identified and enriched with detailed Classical metadata, while previously ripped CDs can benefit from the same information through an optional library rescan, preserving any previously edited details.

**AirPlay 2: More Music, More Possibilities**

Sense 26 also introduces **AirPlay 2**, giving listeners another simple way to enjoy music through their Innuos system.

Audio from any app on an iPhone, iPad or Mac can now be streamed directly to a compatible Innuos streamer, benefiting from its optimised music engine.

Whether enjoying Apple Music, Amazon Music, YouTube, KKBOX, QQ Music or other audio sources outside the Sense ecosystem, AirPlay 2 brings greater flexibility and convenience to everyday listening.

**Availability**

**Sense 26 is the 2026 edition of the software at the heart of Innuos. It is available as a free software update for original Innuos systems from the ZEN Mk3 Series onwards**, continuing to support compatible products up to nine years old.

With Sense 26, Innuos reinforces its commitment to developing hardware and software as one integrated platform, delivering meaningful improvements that bring listeners closer to the music they love.

Further interface improvements, refinements and fixes are included throughout Sense 26, with full details available in the release change log.

**About Innuos**

Founded in 2009, Innuos is a leading digital audio technology company dedicated to unleashing the magic in music. Engineered and handcrafted in Faro, Portugal, its products

are purpose-designed for the most demanding audiophiles with select high-end components.

With over 100 press awards, availability in more than 50 countries and a network of over 210 Hi-Fi partner stores worldwide, Innuos combines precision-engineered hardware with in-house-developed software in pursuit of one goal: more music, more emotion, more magic.
